SCOUT is a cloud optimisation tool designed to help businesses maximise their Microsoft 365 investment by optimising licenses, improving productivity, and securing identities. It also provides insights into how employees interact with solutions, Teams collaboration, and call quality, as well as deeper insights into Microsoft 365. Additionally, it identifies opportunities to save money on unused licensing, zombie accounts, and duplicated functionality.

# Features

## Streamline Licensing

With easy management of your Microsoft 365 license usage, you can avoid waste and plan your renewals effectively.

## App Usage and Adoption

Encourage adoption, assess productivity and collaboration in different parts of your business

## Security Insights

Learn how well your devices, people and data are protected and improve your Microsoft 365 security stance.

## Ease of Visibility

Easy to understand dashboards in a persona based experience with PowerBI embedded for analytics.

## Maximise your Microsoft Investment

Delivering in-depth analytics and practical insights to enhance your Microsoft 365 usage.

## Microsoft 365 Health Check

Get a clear picture of the existing Microsoft 365 environment using powerful AI to provide an insightful report to show opportunities to optimise, secure control your environment.

## Secure Identities

Advance your Zero Trust journey and eliminate remaining security risks by addressing joiner/mover/leaver issues, streamlining governance, and protecting user identities.

## Schedule a Microsoft 365 health check
